Storage Wars

LAN Fest, Storage Wars was a competition put on by the organization to gauge who had the most storage in their system. This was also audited by Engineers at Intel to compare who had the most optimal setup if there was a tie. My build at the time had three, 4TB Western Digital Red HDD's in Raid 0 for an onboard NAS and mass storage for my game library. This is obviously not idea but being as SSD's were just being introduced at the time, storage per dollar allowed this to happen. This setup was then moved to an actual NAS on the Garage LAN's server rack, where five more Western Digital Red 4TB HDD's were added for a total of eight but in Raid 6. This was then used as a Steam Cache server, NAS, backup and anything else we wanted to play with.
